for Agriculture Investments

Pre configured seed to sale solution

Agriculture Investments (AGI) for **D365** is a pre-configured financial back end solution that takes care of all financial aspects for agricultural investment type customers involved in the purchase of farm land for cultivating and sales. With this solution, you will leverage the pre-configured setups that we have gathered as industry standard allowing you a rapid deployment implementation, saving you time and money.

Track land preparation activities

If your land preparation procedures involve many activities, you can track how much actual costs have been added against these tasks. After harvesting, you can then report your revenues and get accurate costs.

- Get a clear-cut understanding of actual cost, budgeted and actual revenue all in one place
- Track relevant time sheets against your farming project with ease
- Create purchase orders, sales orders and requisitions against any project

Financial integration

Every project is linked to the financial back bone of D365. Projects allow you to track different types of asset types such as when construction is going on. Project such as these can be completed and moved into fixed assets.

- Define project budgets and ledger budgets
- Convert project activities can into fixed assets

Rapid configuration

Rapidly deployed and pre-configured, AGI for D365 is ready to go out of the box for Agricultural Investment firms with a 90% standard set of data, saving you time and money.

Our preconfigured data includes the following modules:

- General ledger
- Accounts Receivables
- Accounts Payables
 - Bank
- Fixed Assets
- Expense Management
 - Workflows
 - Inventory
 - Projects
